Official tsunami warnings are broadcast through radio, television, wireless emergency alerts or through outdoor sirens or telephone notifications.

Learn about the four levels of tsunami alerts:

**INFORMATION STATEMENT** - In most cases, a statement is issued to indicate there is no threat of a destructive basin-wide tsunami, but an earthquake or tsunami has occurred that may be of interest.

**TSUNAMI WATCH** - This means potential danger. A tsunami has not yet been verified but could exist and may impact the watch area later.

**TSUNAMI ADVISORY** - A tsunami with the potential to generate strong currents or waves dangerous to those in or very near the water is imminent or expected.

**TSUNAMI WARNING** - Take action! A tsunami may be headed to your area. Significant widespread flooding is imminent or expected. Evacuation is recommended. Get to higher ground or inland.
