

Information and Communication Technology

Professional Certification- Information & Cybersecurity

Much of our personal information resides online, from dates of birth, addresses, credit cards, bank accounts, among others. All this data is vulnerable to cybercrime. Cybercrime is projected to inflict damage to the amount of \$6 trillion globally in 2021 and having networks with a robust security system is the first line of defense against cyber threats. For this reason, the demand of Cybersecurity specialists has increased.

What will you learn?

The certification is geared towards team members in an IT setting that want to develop into management roles. Some of the topics that will be covered in this certification are the following:

- Information Security Governance
- Program Development
- Incident Management
- Risk Management
